Solutions – Innovation Labs

INNOVATION LABS ON THE CLOUD

A key benefit of the AWS Cloud is the creation of agility within an organisation and shortening the time required to innovate. In this context, universities and research labourites can create lean innovation labs in the cloud, taking advantage of flexibility to spin up almost unlimited resources to test hypotheses quickly and cost efficiently. The democratisation that the cloud brings enables any organisation or even individuals access to super computer power on demand. In this presentation we will explore then benefits and features from running your innovation centre in the cloud.
